SINGAPORE'S DEFENCE SCIENCE AND TECHNOLOGY AGENCY PURCHASES PROTECTIVE EYEWEAR SYSTEMS FROM REVISION

Sawfly™ Military Eyewear System with HIP Polarized lenses to be used by Singapore's Army

MONTREAL, CANADA, August 8, 2005 – Revision Eyewear Inc., developers of unique performance-driven eyewear for military and law enforcement clients worldwide, today announced that Singapore's Defence Science and Technology Agency (DSTA) has purchased the Sawfly™ Military Eyewear System on behalf of the Ministry of Defence.

The Sawfly Military Eyewear System (see "Product Visual" below) was specifically developed for battlefield deployment. The Sawfly system developed for DSTA consists of the Sawfly the slim-line frame with microslot adjustable arms, a rugged retention strap and two easily interchangeable one-piece protective polycarbonate lenses. One lens is Revision's unique high-impact polycarbonate polarized lens. It delivers "polarization", "optical perfection" and superior "high-impact resistance" in a full-shield format – something revolutionary that has not been accomplished previously. These polarized lenses are ideal for military applications where reducing reflective glare from water, sand, and snow, durability and combat threat protection are required. A second high-contrast lens for crisp definition in low-light conditions is included as well.

"Singapore's DSTA selected and purchased our Sawfly product in recognition of the critical importance of providing ocular protection to its military personnel," said Alex Hooper, International Sales Manager, Revision Eyewear. "As our first Asian client, we look forward to working very closely with agencies of Singapore's government. In addition to our clients in Europe and North America, our relationship with Singapore is the most recent step in the adoption of Revision products as the new standard in ocular protection for military and law enforcement clients worldwide," Mr. Hooper added.

About Revision Eyewear

Revision Eyewear Inc. develops unique performance-driven eyewear for military and law enforcement clients worldwide. Founded on patented technology, Revision products deliver the highest standards of protection, durability, functionality, compatibility and comfort. Military/tactical clients include the United Kingdom's Ministry of Defence, the Canadian Department of National Defence, the U.S. Army, the U.S. Marine Corps and Singapore's Defence Science and Technology Agency. Privately owned, Revision is located in Williston, Vermont, with offices in the UK and Canada.
